

ReCaptcha

This module allows you to add Google ReCaptcha on your registration and contact forms to protect you from spam.

Installation

1. After the standard installation, you need to set your public and private keys of Google ReCaptcha. To do so, you must create an account and register your site on the Google ReCaptcha configuration page: <https://www.google.com/recaptcha/admin#whyrecaptcha>
It may take 24 hours for your keys to be activated by Google, the module will not be activated until then (wait).

2. In the configuration of the module, you can choose whether you want to display the recaptcha on your registration and contact form pages.

3. For Prestashop 1.4 only :

a) Open the file : /themes/your_theme/contact-form.tpl

b) Search "</textarea>"

c) Add just after : "{if isset(\$HOOK_CONTACT_FORM_BOTTOM)}<center>{\$HOOK_CONTACT_FORM_BOTTOM}</center>{/if}"

4. If the captcha does not appear, before contacting us:

- Go to the Administration > Advanced Settings > Performances
- Select "Force compilation on every call"
- Put "Cache" to "No"
- Save
- Refresh the contact page to regenerate the cache
- You can then restore the previous configuration
